perspectives in human evolution HUMAN EVOLUTION The group was in agreement that during much of human evolution there has been selection for increased dietary flexibility. There is evidence of occasional

dietary specialization; for example, Neandertals as top-level carnivores. However, much of our dietary evolution suggests a broad range of food items. The importance of "fallback foods" was widely discussed.

Dental Perspectives on Human Evolution: State of the Art

perspectives in human evolution Human Evolution and the Anthropocene. Earth's environments have been in a constant state of creation, destruction, and change for the planet's entire history. The last six million years (when hominins began to appear in the fossil record) were particularly volatile and saw many different shifts in environments.
