physics classroom electric current answer key 4. A current is said to exist whenever _____. a. a wire is charged b. a battery is present c. electric charges are unbalanced d. electric charges move in a loop 5. As a quantity, electric current is defined as the _____. a. amount of charge present in a circuit b. potential energy per charge

physics classroom electric current answer key Electric Current. There are several rate quantities in physics. For instance, velocity is a rate quantity - the rate at which an object changes its position. Mathematically, velocity is the position change per time ratio. Acceleration is a rate quantity - the rate at which an object changes its velocity.

physics classroom electric current answer key Electric Current - when charge flows from one place to another. Current is measured in Amperes (or Amps) $I = q/t$ Therefore an Amp = Coulomb/sec. 6. Current = charge/time $I = q/t$ 1 amp = 1 coulomb/second (C/s) Example: A normal household circuit can carry a maximum of 15 amps.

physics classroom electric current answer key Answer: FALSE The electric potential difference is the same in each branch of a parallel circuit. 14. TRUE or FALSE: If resistors are connected in parallel, then the current will be the same through each resistor. Answer: FALSE The current in a branch resistor of a parallel circuit is inversely proportional to the resistance of the resistor. 15.

physics classroom electric current answer key Physics 304 Electric motors In some sense electric motors are electric generators in reverse. A typical electric motor operates by creating an electromagnet with the incoming electric current. That electromagnet is repelled by a permanent magnet inside the motor. This repulsion produces the desired motion.
