topological defects and the non equilibrium dynamics of symmetry breaking phase transitions 1st edit Cosmic strings are hypothetical 1-dimensional topological defects which may have formed during a symmetry breaking phase transition in the early universe when the topology of the vacuum manifold associated to this symmetry breaking was not simply connected. It is expected that at least one string per Hubble volume is formed. Their existence was first contemplated by the theoretical physicist ...

topological defects and the non equilibrium dynamics of symmetry breaking phase transitions 1st edit Also amorphous solids may contain defects. These are naturally somewhat hard to define, but sometimes their nature can be quite easily understood. For instance, in ideally bonded amorphous silica all Si atoms have 4 bonds to O atoms and all O atoms have 2 bonds to Si atom. Thus e.g. an O atom with only one Si bond (a dangling bond) can be considered a defect in silica.

topological defects and the non equilibrium dynamics of symmetry breaking phase transitions 1st edit We explore the higher-form generalized global symmetries and higher anomalies based on a generalized cobordism theory. Our cobordism calculation guides us to classify higher anomalies and topological terms for Yang-Mills (YM) gauge theories and sigma models in various dimensions.

topological defects and the non equilibrium dynamics of symmetry breaking phase transitions 1st edit Starbursts are defects in wrinkled powder coatings wherein the typical random orientation of the wrinkles is disrupted. Instead, wrinkles orient radially around a central point creating a star-like pattern.

topological defects and the non equilibrium dynamics of symmetry breaking phase transitions 1st edit Punktdefekte sind Defekte, die die Ausdehnung eines einzelnen Atoms haben. Formal sind sie also auf einen einzelnen Gitterplatz beschrÃ¤nkt. Es lassen sich drei FÃ¤lle unterscheiden. Leerstellen (vacancies) sind freie GitterplÃ¤tze, die im regulÃ¤ren Gitter besetzt sind.; Zwischengitteratome (interstitials) sitzen auf PlÃ¤tzen, die im regulÃ¤ren Gitter unbesetzt sind.
